Two-step verification: test guide

How to check, on the live site, that sign-up and two-step verification (MFA) work from start to finish. About 15 minutes. You need your phone with **Google Authenticator** or **Microsoft Authenticator**, and a fresh email address.

> I ran this whole journey first on our local copy (same site and sign-in code as live, a local database, the sign-in service simulated) with a test person, "Priya Sharma". These are its screenshots; your screens will match. The WorkOS sign-in page in step 13 is the real one. Step 14, where WorkOS asks for the authenticator code, has no screenshot: only a real sign-in can show it, and that is your test.

A. Sign up B. Turn on two-step C. Sign out / sign in D. Extra checks Checklist

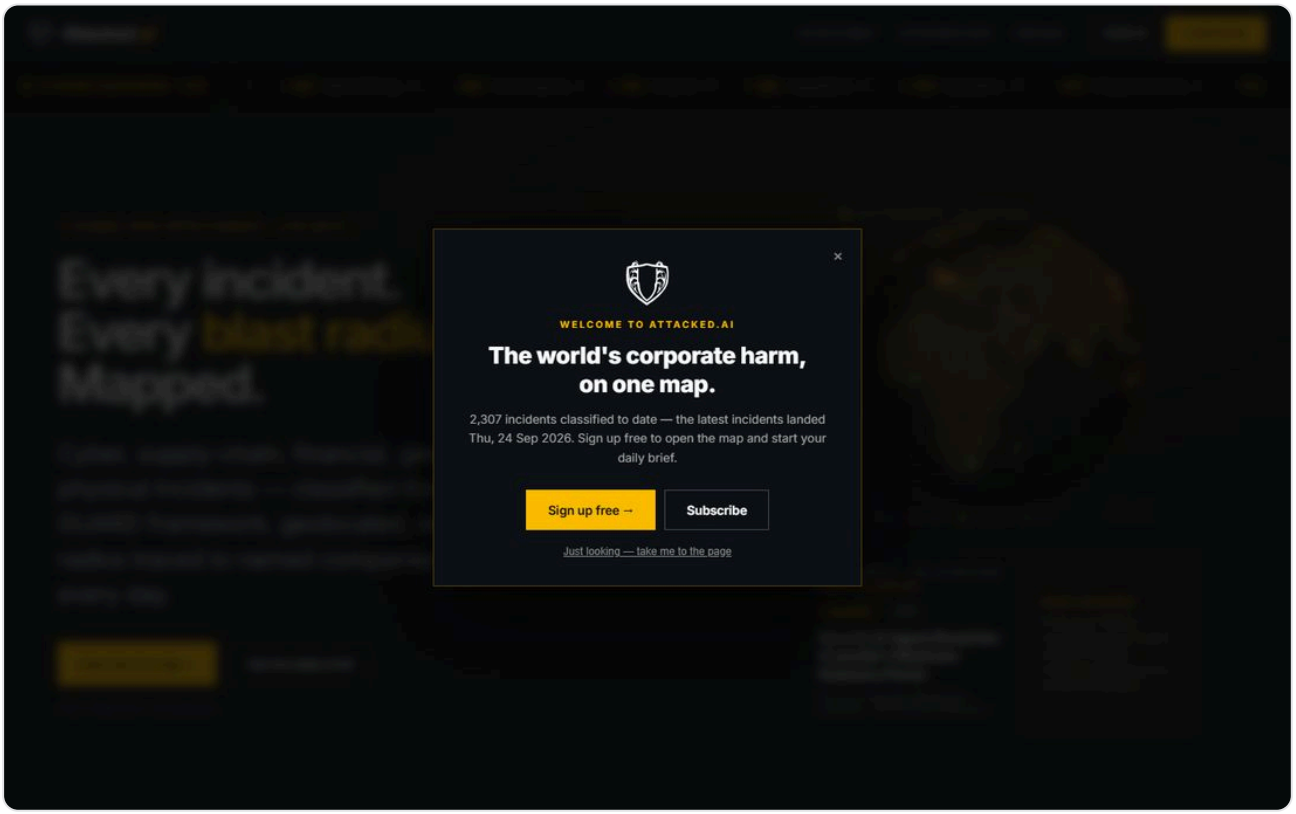

---

A. Create a new account (the one-page sign-up)

1 **Open the site, signed out**

Go to attackedmap.vercel.app in a private window (or sign out first). Click **Sign up free** on the welcome box (or any gold sign-up button).

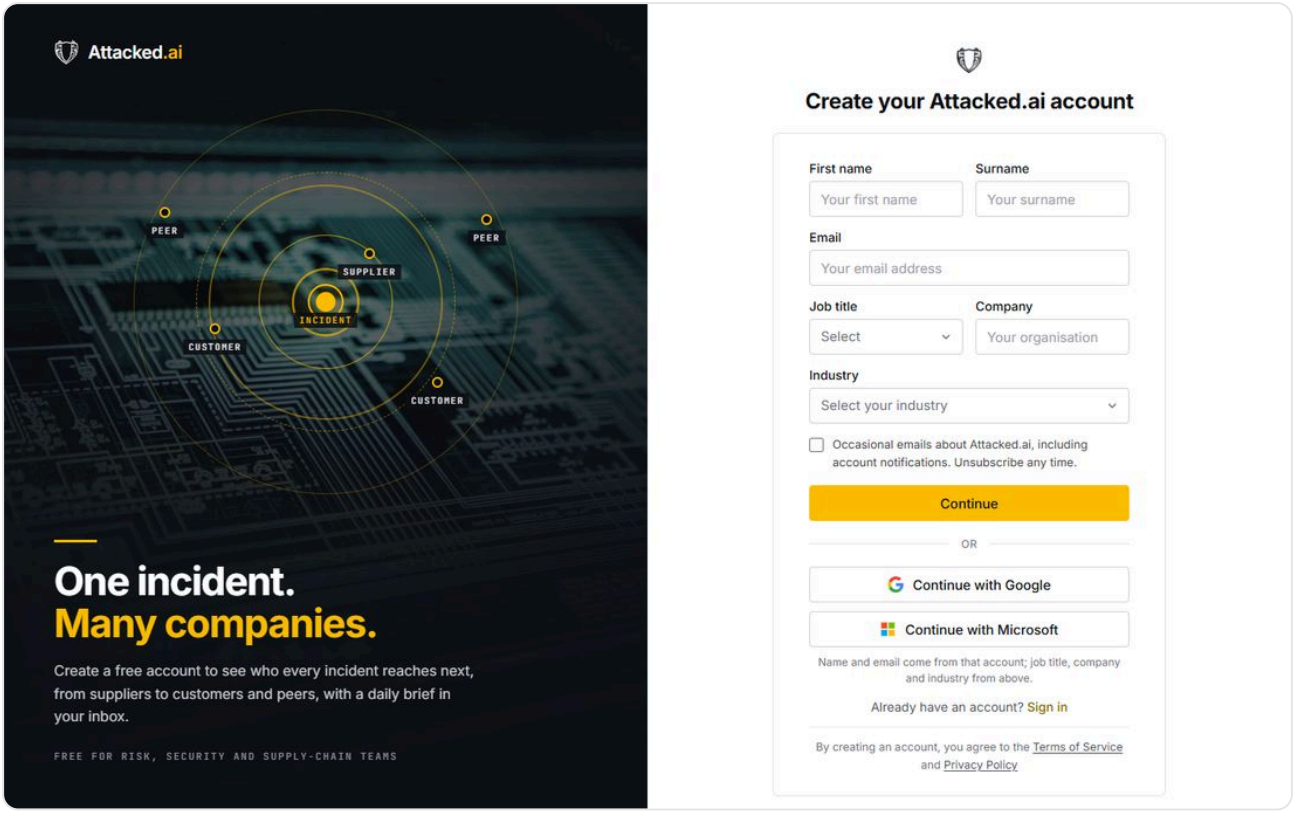

YOU SHOULD SEE The home page with its welcome box. Every sign-up button opens the sign-up page.

2 The sign-up page

You can also open it directly: attackedmap.vercel.app/?signup.

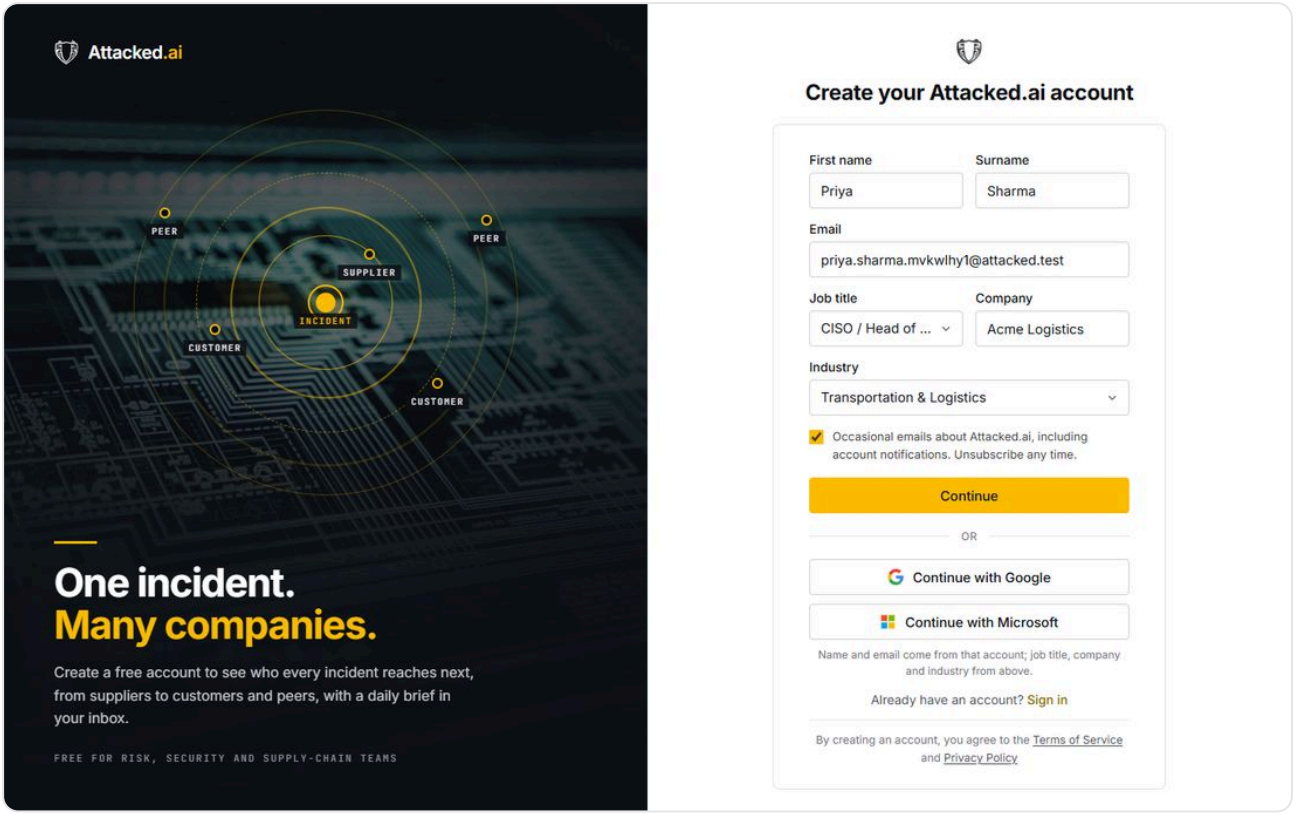

YOU SHOULD SEE Every question on one page: first name, surname, email, job title, company, industry.

3 Fill everything in, then Continue

Use a **fresh address** so it counts as a new user, e.g. `yourname+mfa1@gmail.com` (it arrives in your normal inbox). Pick a job title and an industry, type a company, then press **Continue**.

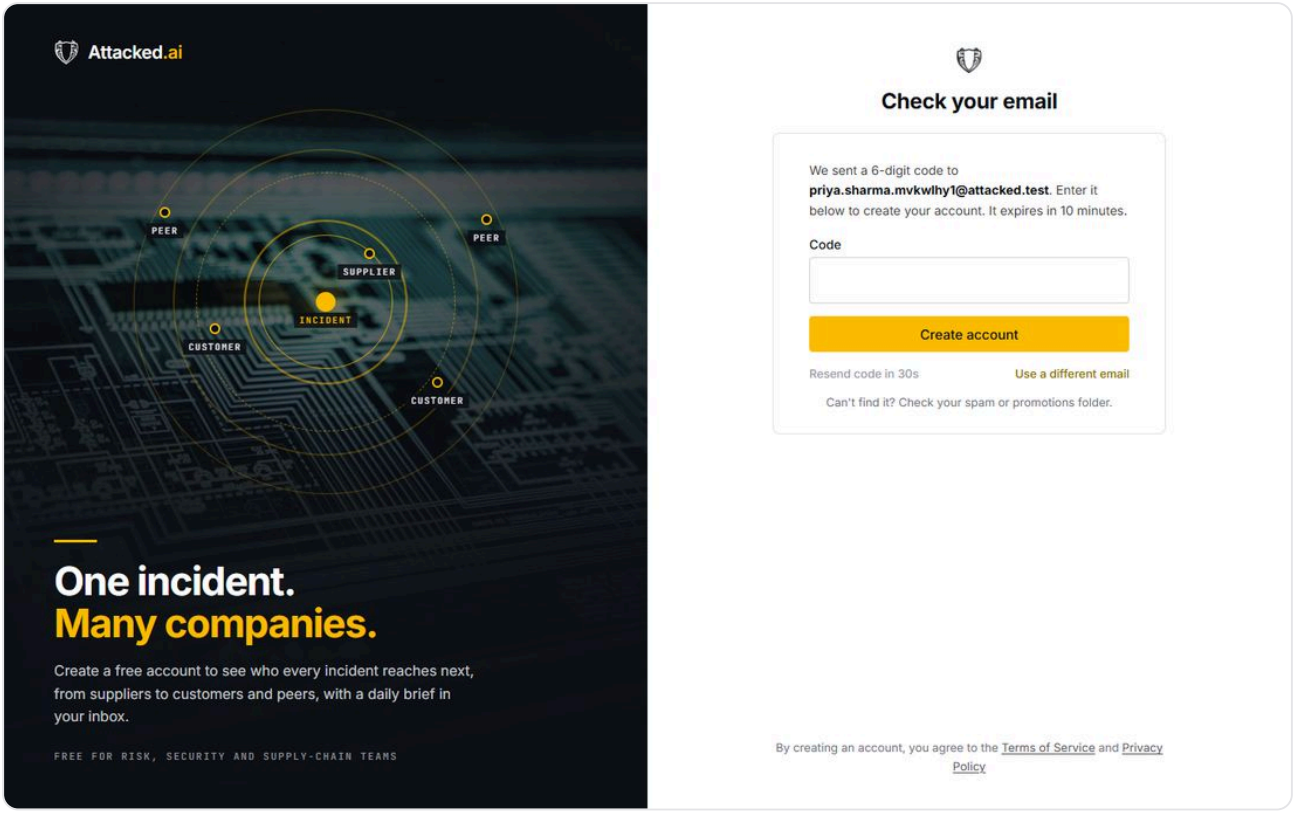

YOU SHOULD SEE The button changes to "Sending your code…".

4 Type the code from the email

Open the email from Attacked.ai / WorkOS and type the 6-digit code. **Check there is only ONE email.**

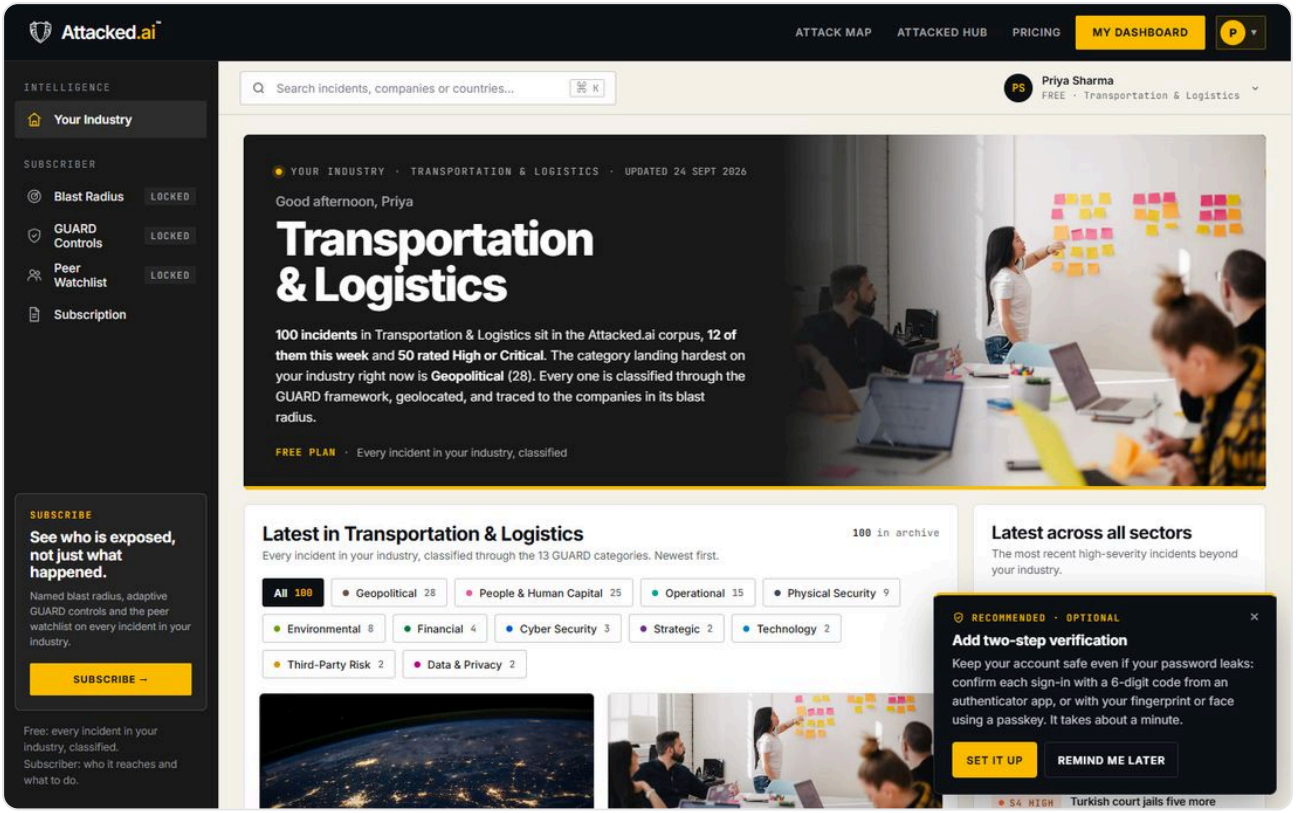

YOU SHOULD SEE "Check your email", the address you typed, a code box, and Resend (after 30 s).

5 Your dashboard

Press **Create account**.

YOU SHOULD SEE Your industry's dashboard straight away. **No "One last step" box.** A small card offers two-step verification ("Set it up" / "Remind me later") — it is optional.

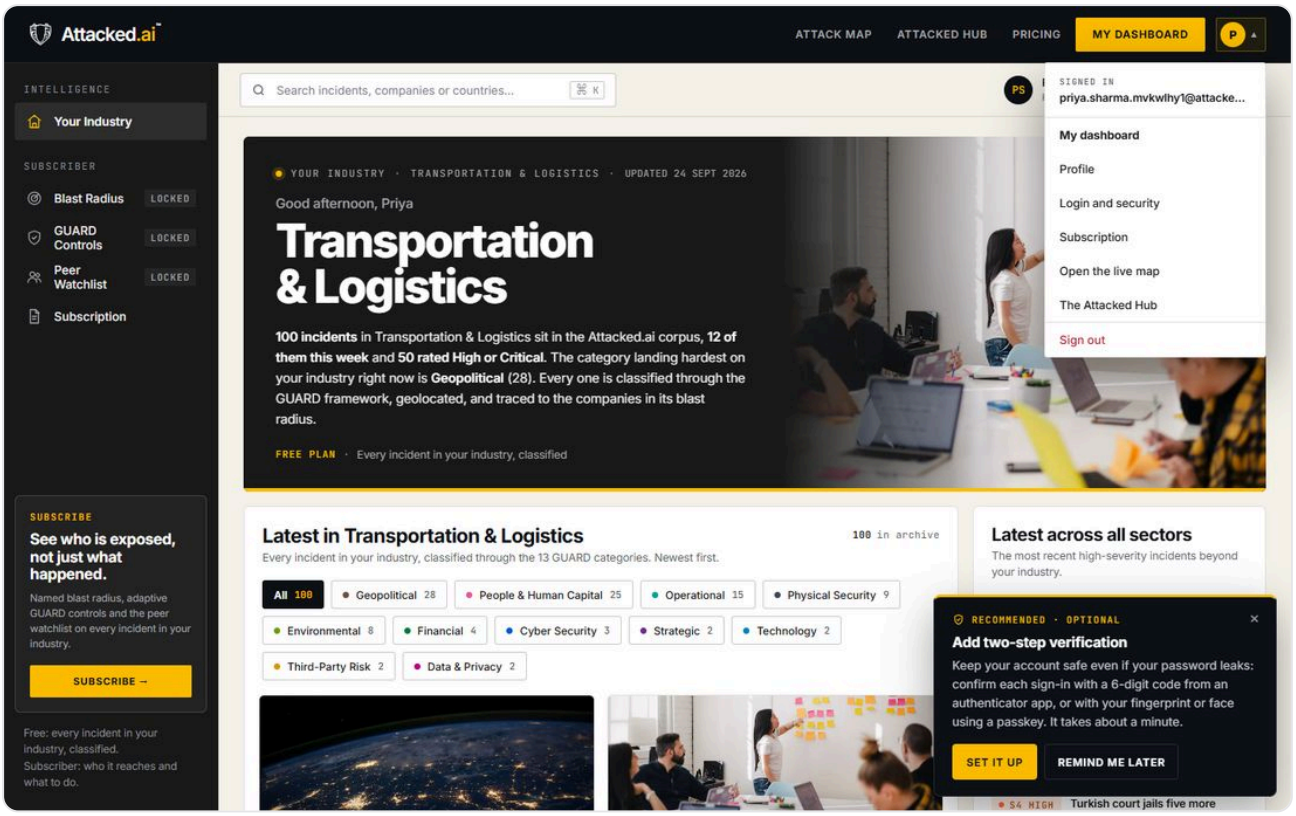

B. Turn on two-step verification

6 Open Login and security

Click your initial (top right) → **Login and security**. (Or press "Set it up" on the card.)

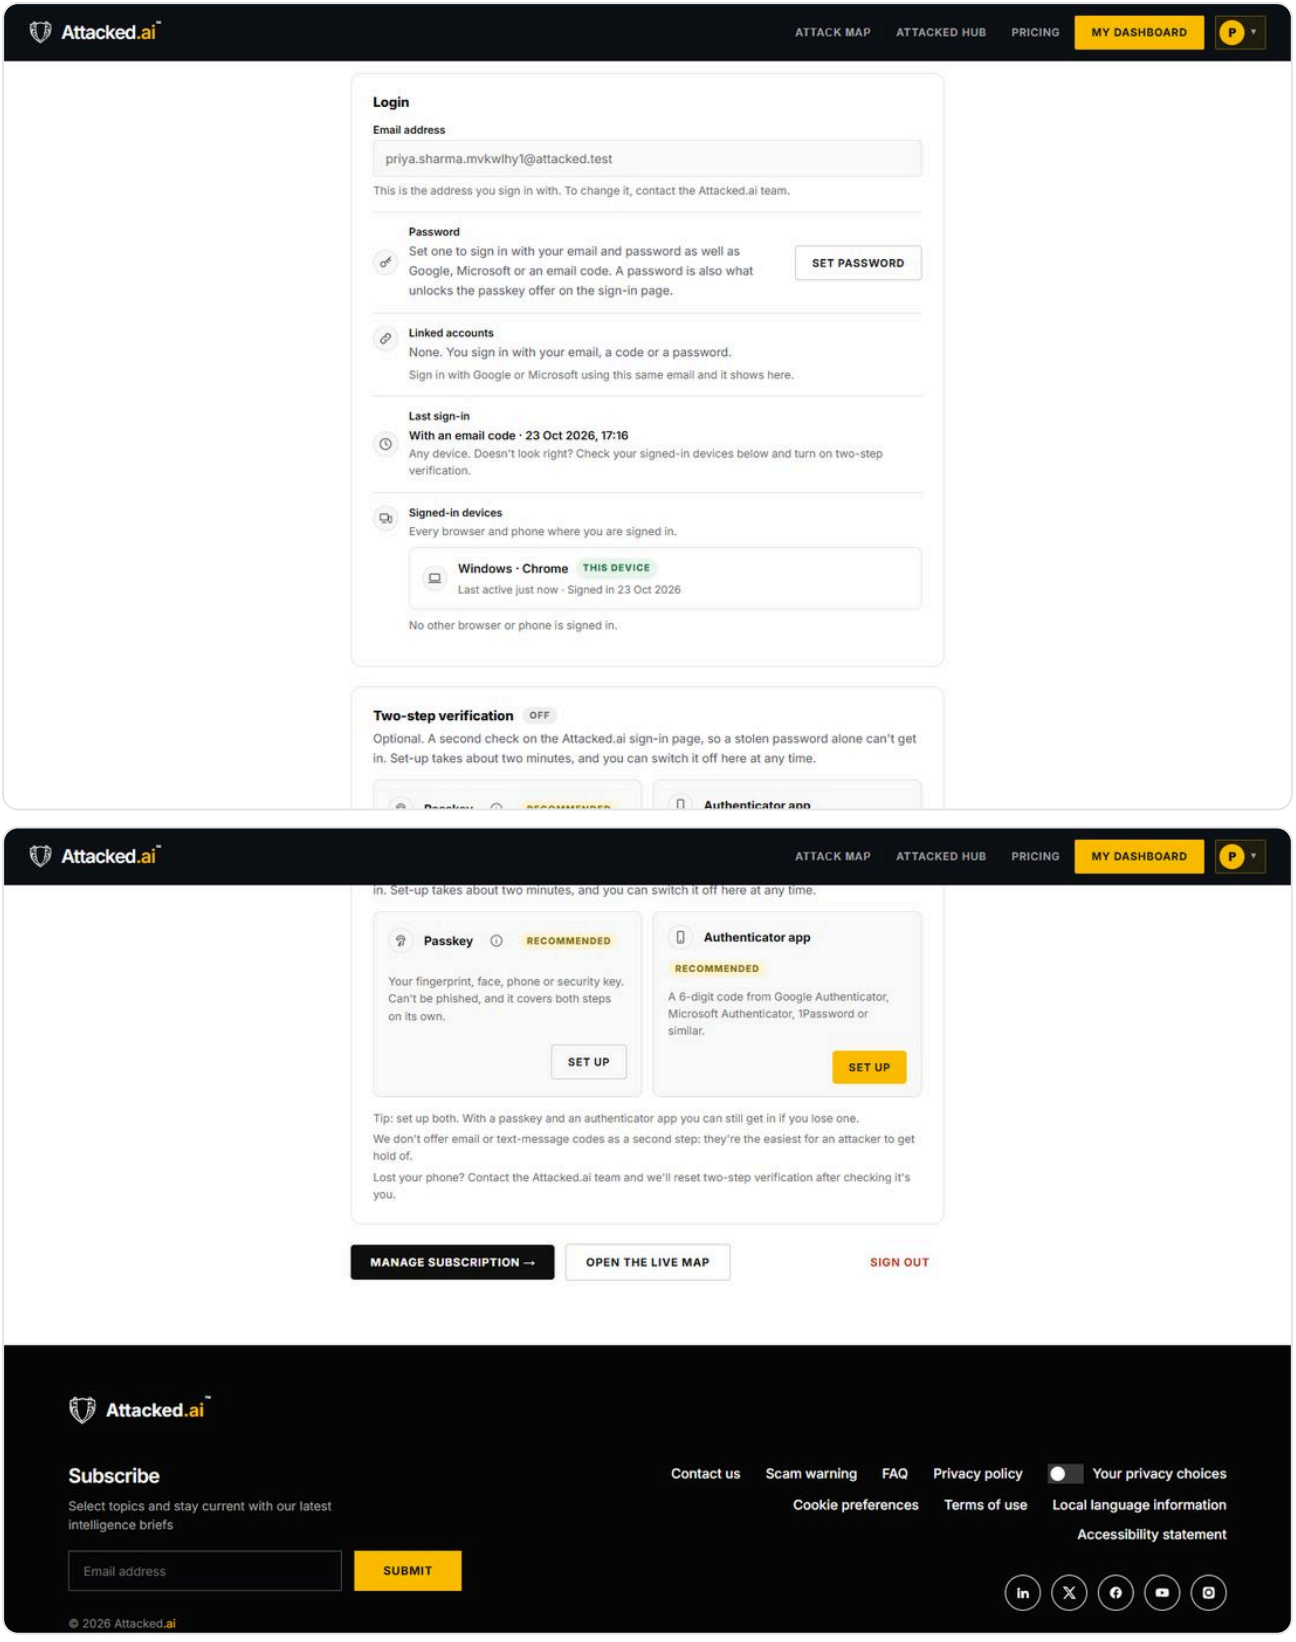

YOU SHOULD SEE The account menu with "Login and security".

7 Login and security

Scroll down to **Two-step verification**.

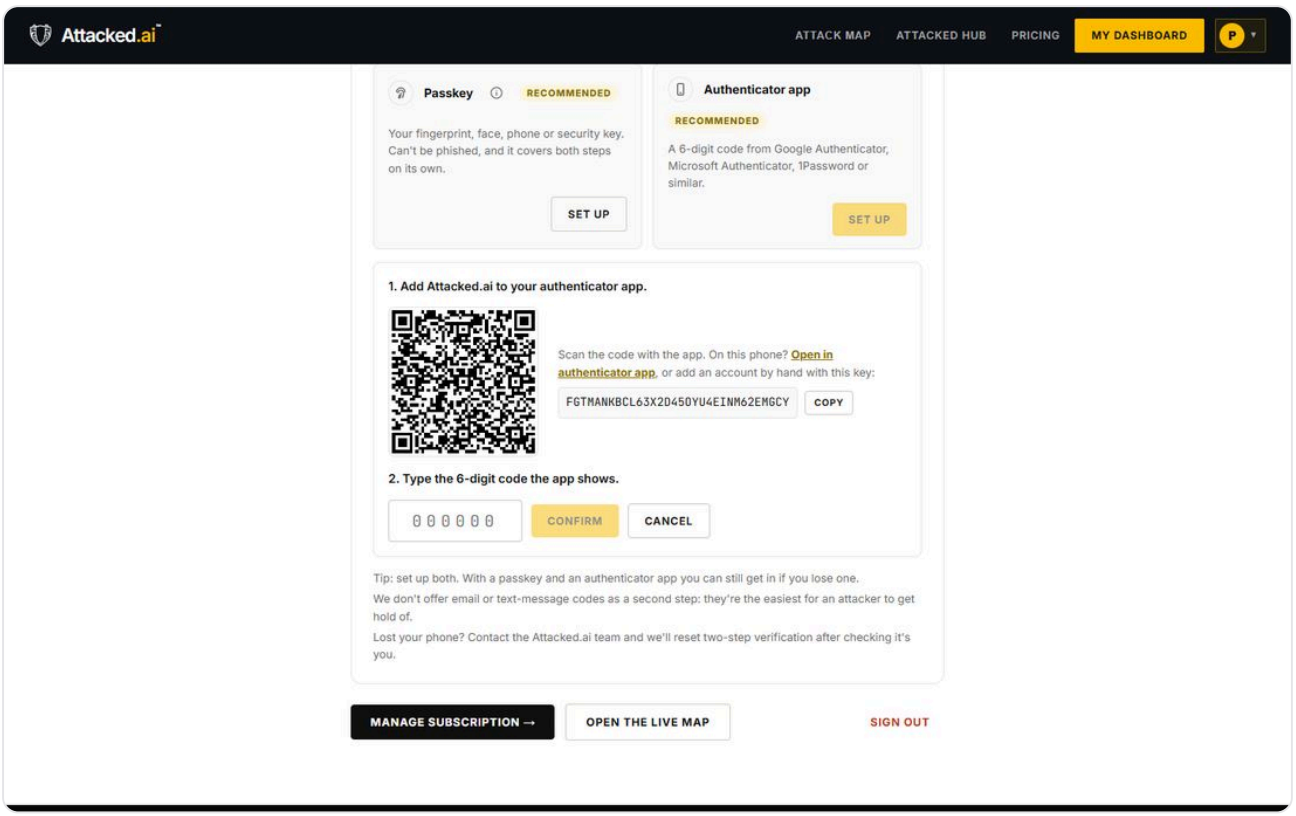

YOU SHOULD SEE Your sign-in email, password, linked accounts, last sign-in and signed-in devices; then Two-step verification **OFF** with two options: Passkey and Authenticator app.

8 Authenticator app → Set up

Install **Google Authenticator** or **Microsoft Authenticator** on your phone. Press **Set up** under Authenticator app and scan the QR code with the app (or type the key by hand).

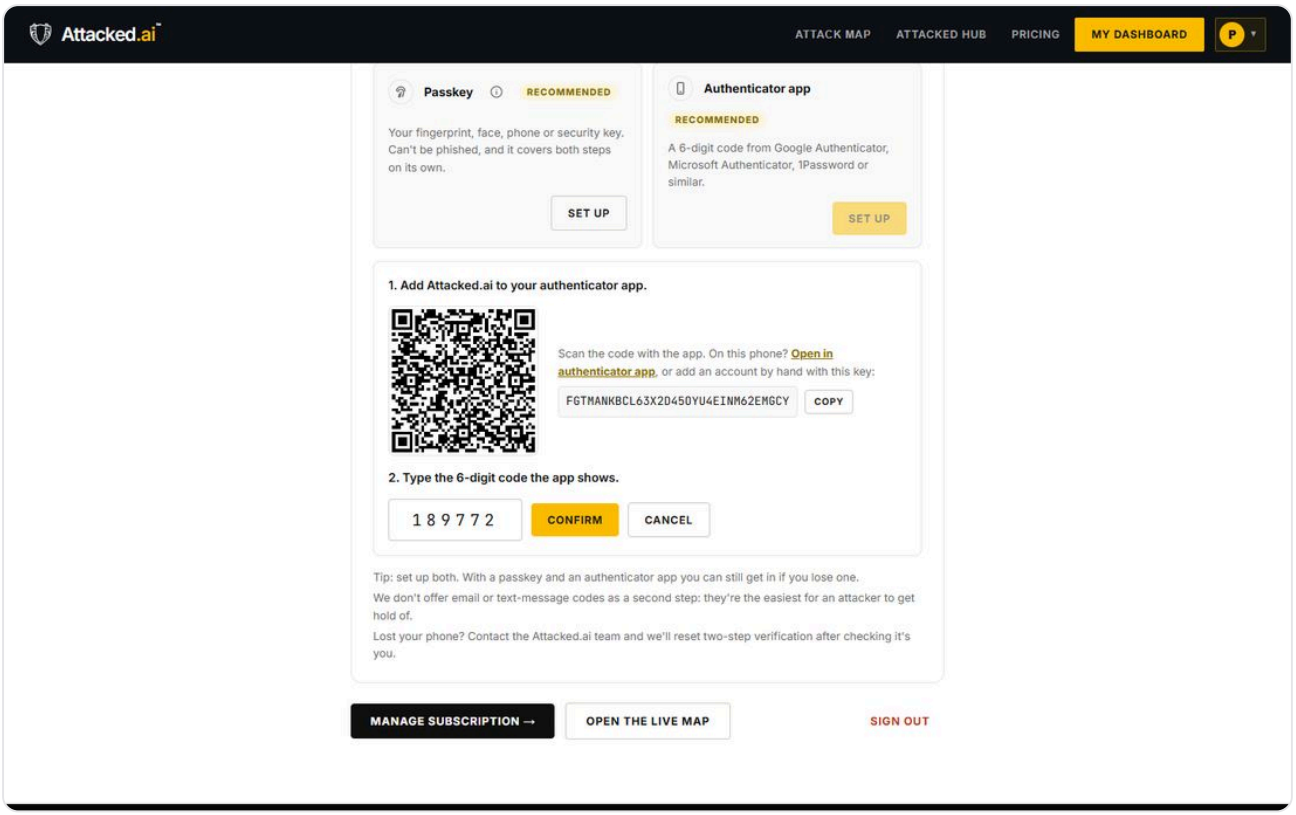

YOU SHOULD SEE A QR code, a key you can copy, and a box for the code.

9 Type the app's code, then Confirm

Type the 6-digit code your app shows for Attacked.ai and press **Confirm**.

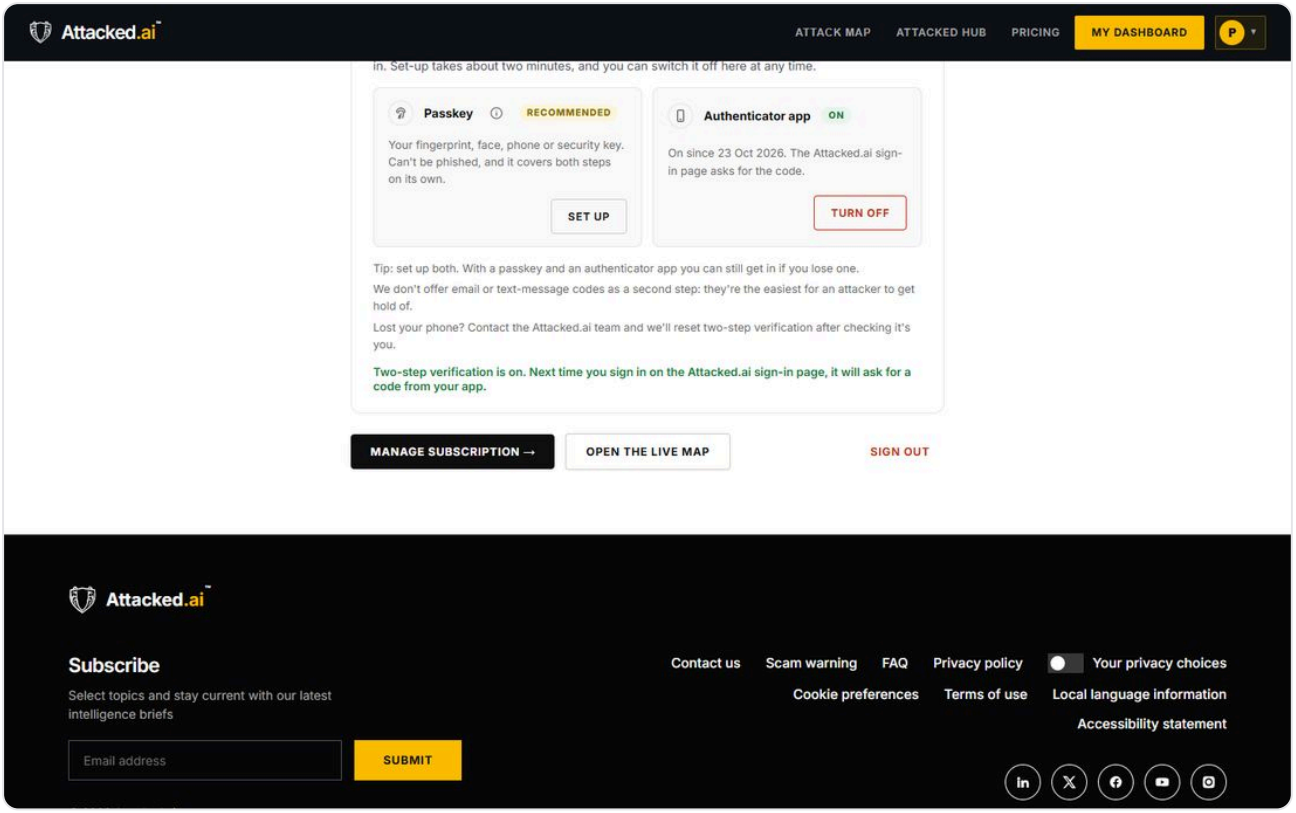

YOU SHOULD SEE The Confirm button lights up once six digits are in.

10 Two-step is On

—

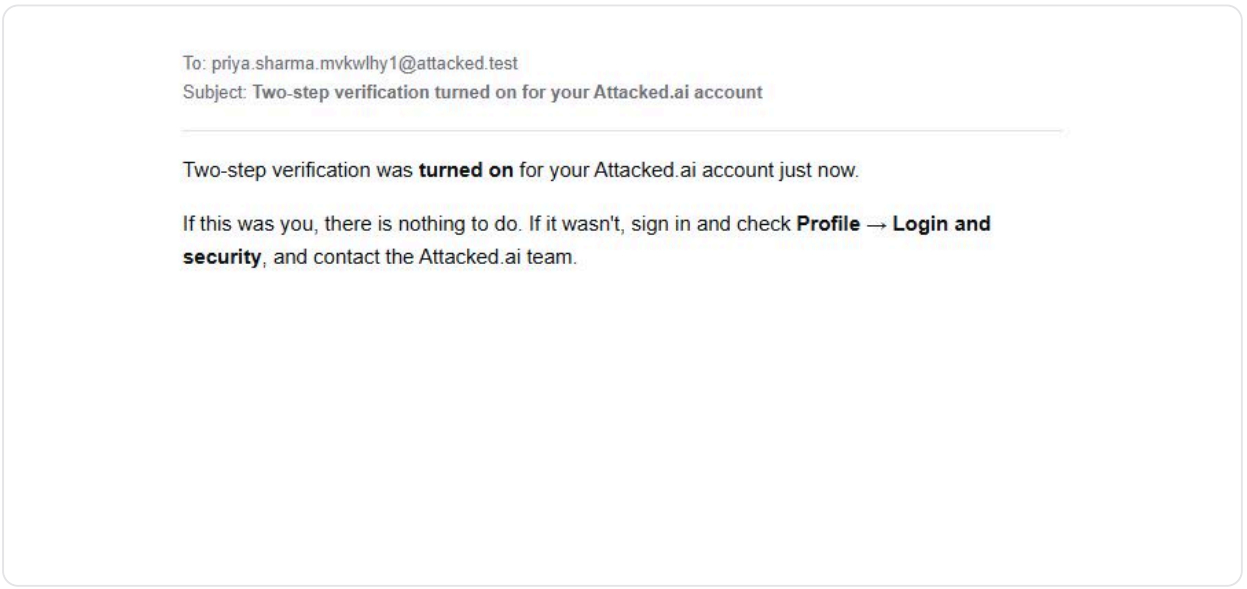

YOU SHOULD SEE Authenticator app **ON**, "On since today", and a green line: next time you sign in, the sign-in page will ask for a code from your app.

11 The confirmation email

Check your inbox.

YOU SHOULD SEE An email: "Two-step verification turned on for your Attacked.ai account".

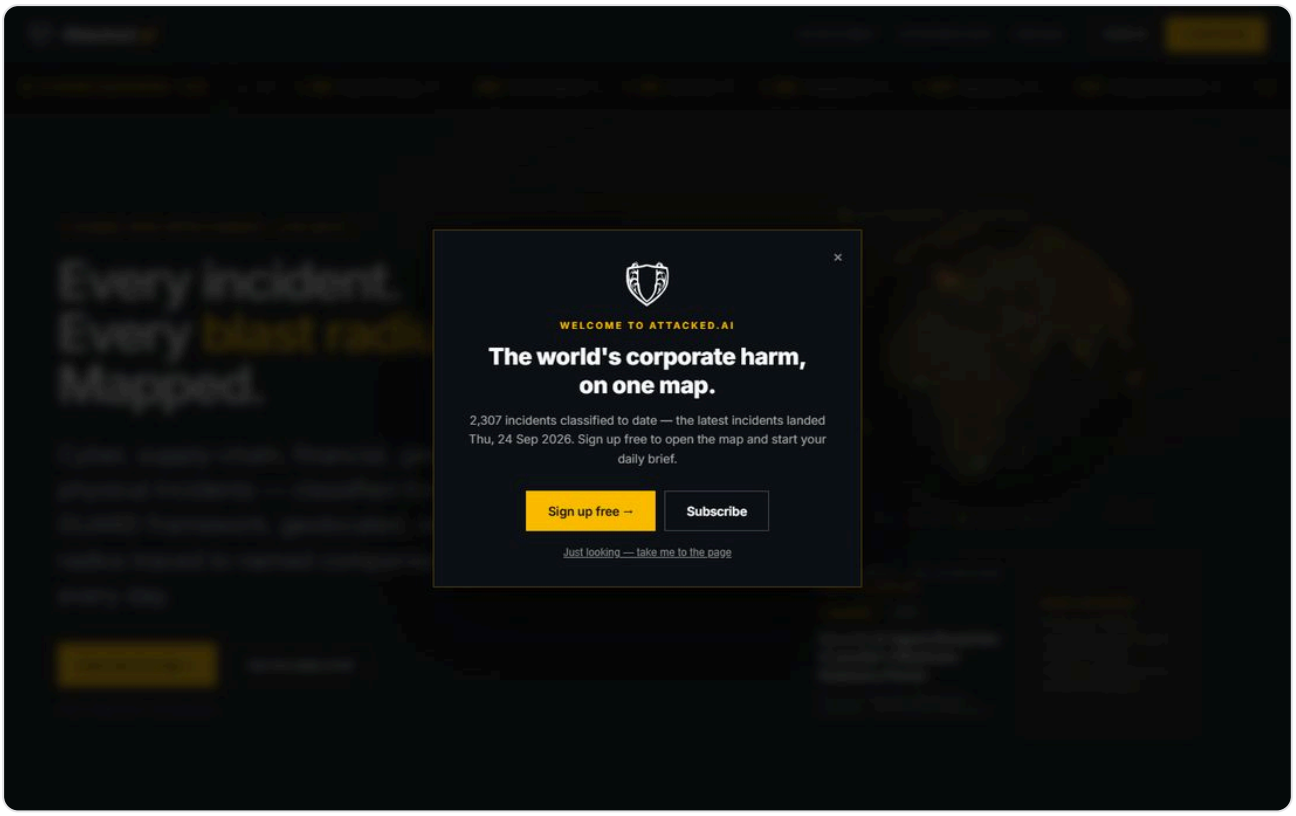

C. Sign out and sign in again — THE MAIN TEST

12 Sign out

Initial (top right) → **Sign out**. Then click **Sign in** (top right).

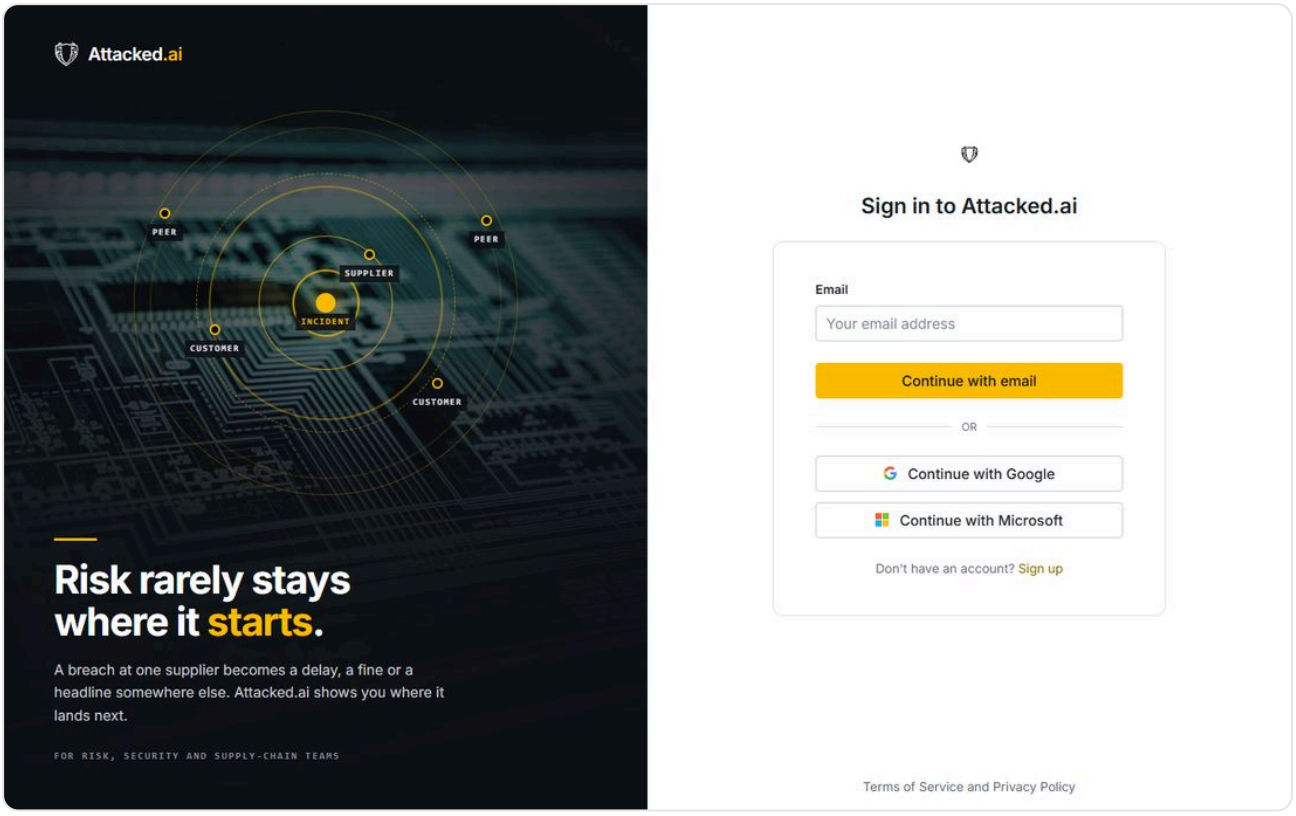

YOU SHOULD SEE The home page, signed out.

13 The WorkOS sign-in page

Sign in the way you like: **email code** (type the address, then the emailed code), or Google / Microsoft if that address is a Google / Microsoft account.

YOU SHOULD SEE The Attacked.ai sign-in page (hosted by WorkOS). This screenshot is the real page.

14 WorkOS asks for the authenticator code

This is the check your senior asked about. After the email code (or Google / Microsoft), WorkOS should ask: *enter the 6-digit code from your authenticator app*. Open the app, type the current code.

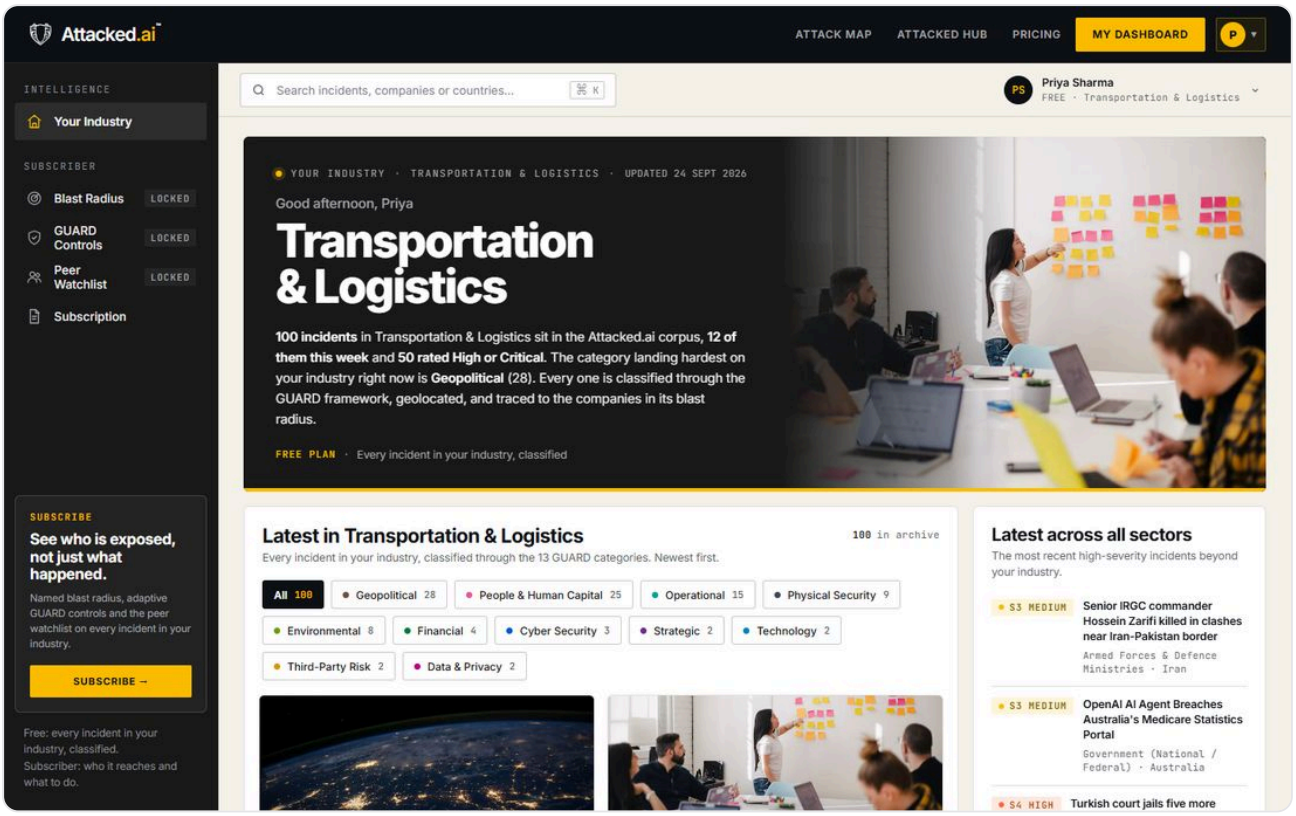

YOU SHOULD SEE A code box on the WorkOS page. **Take a screenshot of it and send it to me.** If WorkOS does not ask for the code and lets you straight in, tell me: that is the one thing still unproven.

> **No screenshot for this screen.** It belongs to WorkOS and only appears after a real sign-in with two-step on, which I am not allowed to do on the live system. You will be the first to see it.

15 Back on your dashboard

—

YOU SHOULD SEE Your dashboard, signed in.

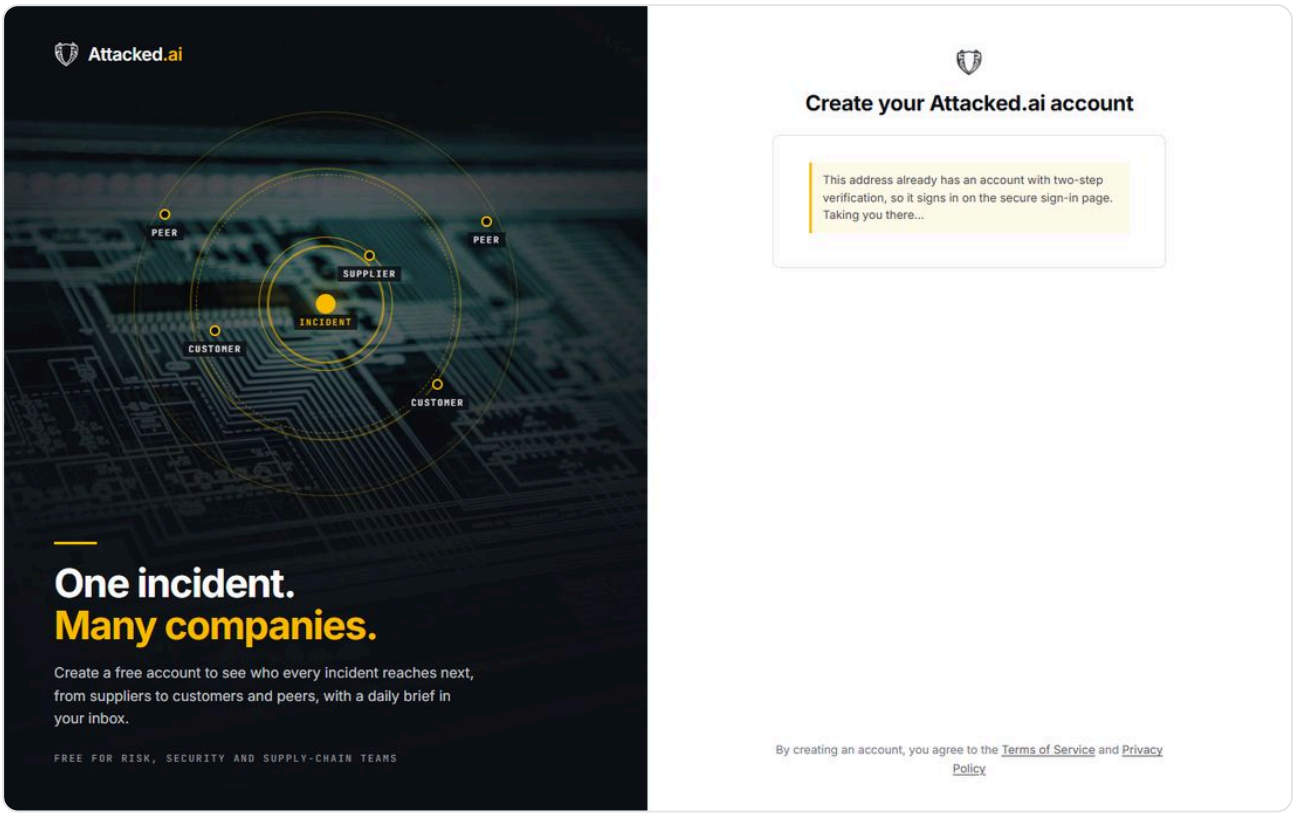

D. Extra checks

16 The sign-up page never skips the code

Sign out. Open /?signup and fill it in with the **same address** (the one with two-step on), then type the emailed code.

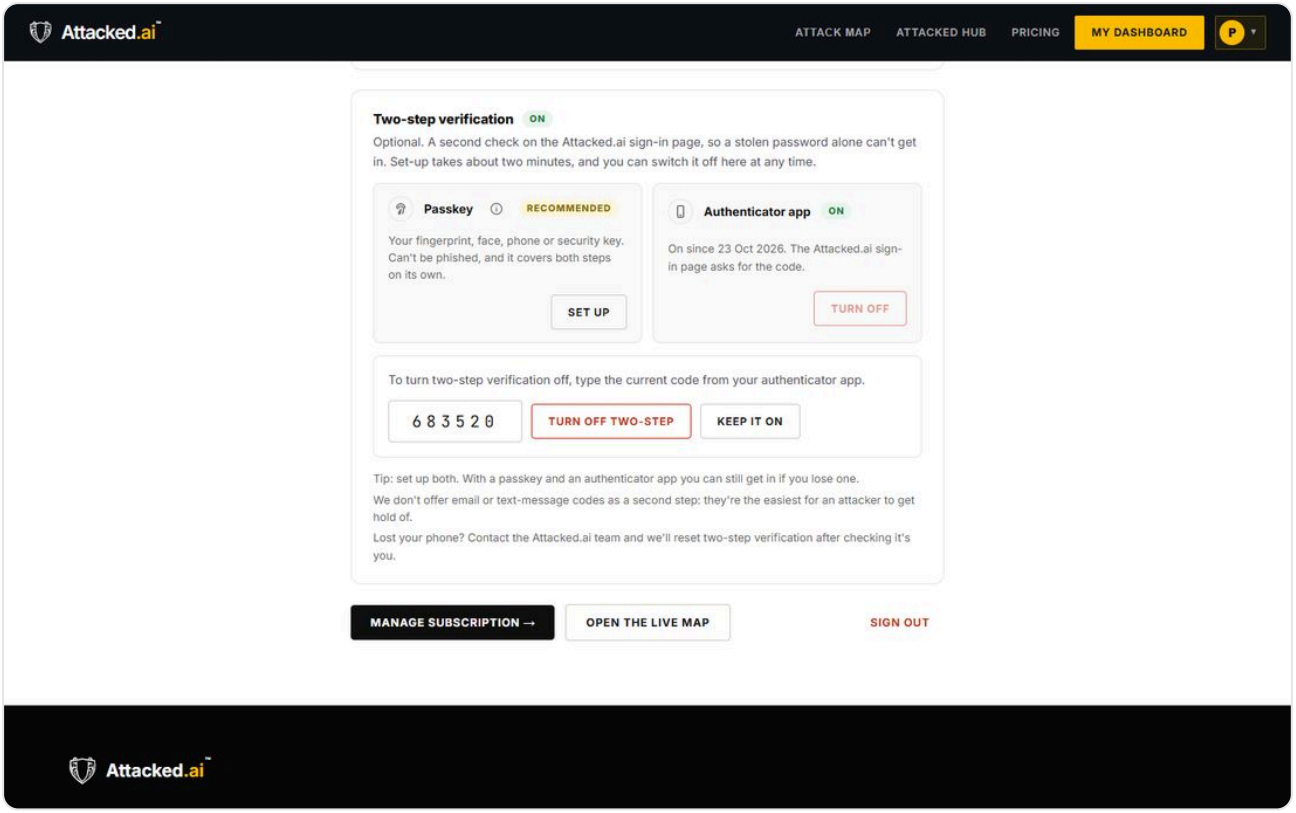

YOU SHOULD SEE "This address already has an account with two-step verification, so it signs in on the secure sign-in page. Taking you there…" — then the WorkOS page, which asks for the authenticator code.

17 Turn two-step off

Login and security → Authenticator app → **Turn off**, type a current code from the app, press **Turn off two-step**.

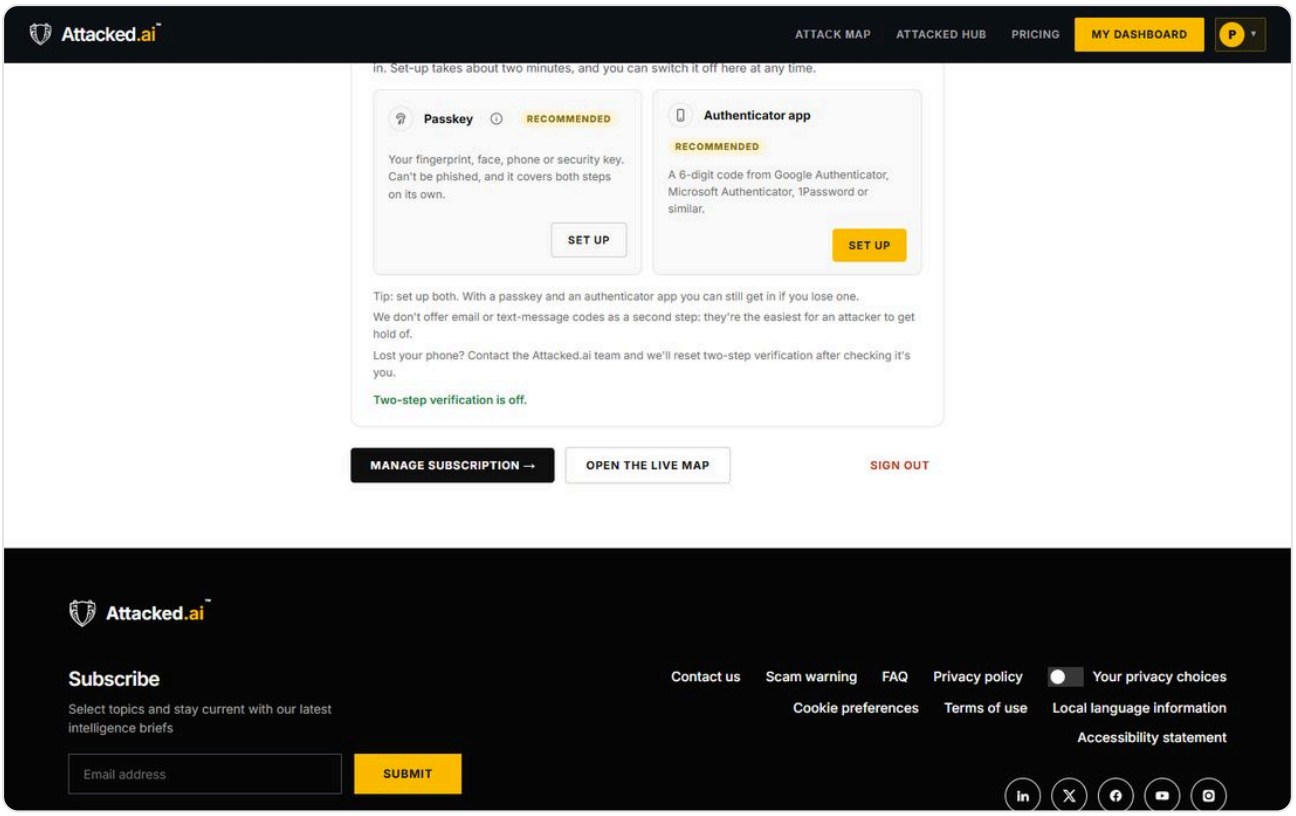

YOU SHOULD SEE It asks for a current code first (and a recent sign-in). An email confirms it.

18 Two-step is Off again

—

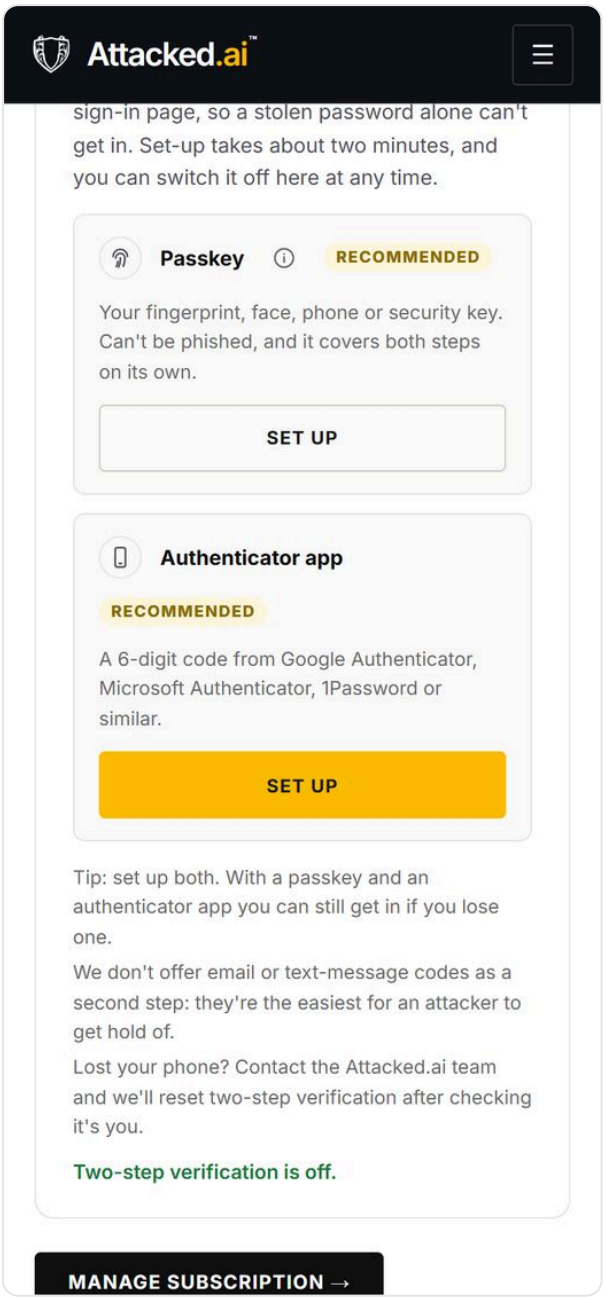

YOU SHOULD SEE Authenticator app back to **Set up**. The next sign-in asks for the email code only.

19 On a phone

Repeat steps 6–10 on your phone if you like.

YOU SHOULD SEE The same cards, one under the other.

Checklist — tick each one

☐	Sign-up page asks everything on one page	A2–A3
☐	Exactly one code email arrives	A4
☐	Dashboard after sign-up, no "One last step"	A5
☐	Profile shows job title, company, industry	A5 (Profile)

☐	Two-step turns on; email "turned on" arrives	B8–B11
☐	After sign-out, WorkOS asks for the authenticator code	C14 — the key test
☐	Sign-up page with a two-step address goes to the WorkOS sign-in	D16
☐	Two-step turns off with a current code	D17–D18

> Send me: the screenshot of step 14 (or "it did not ask"), and the email address you used. I will check the database side for that account.
